

Position Close Update: Kulicke and Soffa Industries (KLIC)

Kulicke and Soffa (KLIC) – Closing Long Position – up 26% vs. S&P up 35%

We originally featured Kulicke and Soffa (KLIC: \$27/share) as a Long Idea in our article “[Selling Shovels in a Gold Rush: Buy This Sector to Profit From the Internet of Things](#)” on June 12, 2017. That article highlighted four stocks in the semiconductor equipment industry that investors should buy.

We later made KLIC a standalone Long Idea on [January 31, 2018](#). Since that article, KLIC has performed exactly in-line with the S&P 500, with both up 16%.

Get the best fundamental research

Of the four stocks featured in the original article, KLIC is the only one to underperform. The performance of the other three is as follows:

- **Orbotech (ORBK):** Up 60% vs. S&P 500 up 7% when we closed the position on [November 27, 2017](#)
- **KLA-Tencor (KLAC):** Up 73% vs. S&P 500 up 35%, still open
- **Lam Research (LRCX):** Up 92% vs. S&P 500 up 35%, still open

KLIC’s business was hit much harder by the recent cyclical downturn in the industry. Its net operating profit after tax (NOPAT) declined by 88% in 2019 compared to just a 15% decline for KLAC (which acquired ORBK) and a 24% decline for LRCX.

KLIC’s struggles appear to be due in part to the fact that their wire bonding method of chip packaging – where KLIC dominates – is losing ground to other methods that [allow for more dense and complex chip design](#). The cyclical downturn appears to have hastened this transition, which led to the significant erosion of KLIC’s profitability.

In retrospect, we erred in placing KLIC in the same tier as the other three companies above. Its fundamentals looked similar at the time, but its reliance on a technology slowly becoming obsolete made it a much riskier stock. The recent decline in profitability means KLIC now earns our Neutral rating, so we are closing this position.

Figure 1: KLIC vs. S&P 500 – Price Return – Unsuccessful Long Call

HBS & MIT Sloan research reveals that:

- **Markets are inefficiently assessing earnings because no one reads the footnotes.**
- **Our technology brings the material footnotes data to market for the first time ever.**

Combining human expertise with NLP/ML/AI technologies ([featured by Harvard Business School](#)), we shine a light in the dark corners (e.g. footnotes) of hundreds of thousands of financial filings to unearth critical details.

The HBS & MIT Sloan paper, [Core Earnings: New Data and Evidence](#), shows how our superior data drives uniquely comprehensive and independent debt and equity research.

This [paper](#) compares our analytics on a mega cap company to other major providers. The Appendix details exactly how we stack up.

Quotes from HBS & MIT Sloan professors on our research:

Get better research:

“...the NC dataset provides a novel opportunity to study the properties of non-operating items disclosed in 10-Ks, and to examine the extent to which the market impounds their implications.” – page 20

Pick better stocks:

“Trading strategies that exploit cross-sectional differences in firms’ transitory earnings produce abnormal returns of 7-to-10% per year.” – Abstract

Avoid losses from using other firms’ data:

“...many of the income-statement-relevant quantitative disclosures collected by NC do not appear to be easily identifiable in Compustat...” – page 14

Build better models:

“Core Earnings [calculated using New Constructs’ novel dataset] provides predictive power for various measures of one-year-ahead performance...that is incremental to their current-period counterparts.” – page 4

Exploit market inefficiencies:

“These results ... suggest that the adjustments made by analysts and Compustat to better capture core earnings are incomplete. Moreover, the non-core items identified by NC produce a measure of core earnings that is incremental to alternative measures of operating performance in predicting an array of future income measures.” – page 26

Fulfill fiduciary duties:

“An appropriate measure of accounting performance for purposes of forecasting future performance requires detailed analysis of all quantitative performance disclosures detailed in the annual report, including those reported only in the footnotes and in the MD&A.” – page 33-34

DISCLOSURES

New Constructs®, LLC (together with any subsidiaries and/or affiliates, "New Constructs") is an independent organization with no management ties to the companies it covers. None of the members of New Constructs' management team or the management team of any New Constructs' affiliate holds a seat on the Board of Directors of any of the companies New Constructs covers. New Constructs does not perform any investment or merchant banking functions and does not operate a trading desk.

New Constructs' Stock Ownership Policy prevents any of its employees or managers from engaging in Insider Trading and restricts any trading whereby an employee may exploit inside information regarding our stock research. In addition, employees and managers of the company are bound by a code of ethics that restricts them from purchasing or selling a security that they know or should have known was under consideration for inclusion in a New Constructs report nor may they purchase or sell a security for the first 15 days after New Constructs issues a report on that security.
