

## Don't Buy Rambus (RMBS) Until After You Watch This Video

Sometimes stocks are expensive, and sometimes they are ridiculously expensive.

In a recent client training session, we did the work to quantify just how expensive Rambus' (RMBS) stock is at \$61/share. We use our best-in-the-world reverse discounted cash flow (DCF) model to apply expectations investing and analyze the future cash flow expectations baked into the stock.

What we found might shock you.

### We've Seen this Movie Before

The problem with popular stocks is that they can stay so expensive for so long that investors just assume the stock deserves its valuation.

We caution investors against falling into this trap, and we wrote this report to show you just how dangerous and terrible the trap is.

### The Honest Narrative on RMBS

As we do for all of our [Reverse DCF Case Studies](#), we use our models to quantify the future performance of the company required to justify the stock price.

Specifically, our model shows that to justify ~\$61/share, Quantum Computing would have to:

1. grow revenue at 12% compounded annually for 30 years while also
2. improving its return on invested capital (ROIC) from 19% to ~260%, or higher than Google (GOOGL), Meta (META), Amazon (AMZN), Apple (AAPL), Microsoft (MSFT) or Amazon (AMZN).

I think it is fair to say that this stock has shockingly high expectations for future cash flows embedded in its stock price. Keep in mind, we are not saying the company will not meet these expectations. We are telling investors what hurdles the company must clear for the stock to be fairly valued at its current price.

To be clear, an investor would have to believe that the company's future performance would be significantly better than what's baked into the current price to believe there was material upside in the stock.

### More Honest Narratives

With our DCF model, it's easy and only takes a few seconds to quantify the impact of anything that affects future revenues, margins, and cash flows.

If you're interested in seeing more examples of how our DCF model works, I recommend checking out the Reverse DCF Case Studies [here in our Online Community](#). To join our Online Community, complete [this form](#).

Our community is free to join as is access to the Reverse DCF case studies.

### How To Avoid the Landmines

Whenever stocks get that expensive, it is only a matter of time before they fall back to earth as the law of competition inevitably proves the expectations for future cash flows to be overly optimistic.

We have multiple [Model Portfolios](#), including our [Zombie Stocks](#) list, to warn investors of stocks to avoid and alert them to stocks that get our Attractive rating. We also provide best-in-class ratings for stocks, ETFs, and mutual funds.

We hope you enjoy this research. Feel free to share with friends and colleagues!

## ***It's Official: We Deliver the Best Fundamental Data in the World***

---

Many firms claim their research is superior, but none of them can prove it with independent studies from highly-respected institutions as we can. Three different papers from both the public and private sectors show:

1. The stock market is missing footnotes – and only we have that critical data.
2. Legacy fundamental datasets suffer from significant inaccuracies, omissions, and biases.
3. Our proprietary drives novel alpha. Our measures of [Core Earnings](#) and [Earnings Distortion](#) materially improve stock picking and forecasting of profits.

### **Best Fundamental Data in the World**

In [The Journal of Financial Economics](#), a top peer-reviewed journal, [Core Earnings: New Data & Evidence](#) proves our Robo-Analyst technology overcomes material shortcomings in legacy firms' data collection processes to provide superior [fundamental data](#), [earnings](#) models, and [research](#). More [details](#).

Key quotes from the paper:

- “[New Constructs’] *Total Adjustments* differs significantly from the items identified and excluded from Compustat’s adjusted earnings measures. For example... 50% to 70% of the variation in *Total Adjustments* is not explained by S&P Global’s (SPGI) *Adjustments* individually.” – pp. 14, 1<sup>st</sup> para.
- “A final source of differences [between New Constructs’ and S&P Global’s data] is due to data collection oversights...we identified cases where Compustat did not collect information relating to firms’ income that is useful in assessing core earnings.” – pp. 16, 2<sup>nd</sup> para.

### **Superior Models**

Ernst & Young features the superiority of our ROIC, NOPAT and Invested Capital research to Capital IQ & Bloomberg’s in [Getting ROIC Right](#). See the [Appendix](#) for direct comparison details.

Key quotes from the paper:

- “...an accurate calculation of ROIC requires more diligence than often occurs in some of the common, off-the-shelf ROIC calculations. Only by scouring the footnotes and the MD&A [as New Constructs does] can investors get an accurate calculation of ROIC.” – pp. 8, 5<sup>th</sup> para.
- “The majority of the difference...comes from New Constructs’ machine learning approach, which leverages technology to calculate ROIC by applying accounting adjustments that may be buried deeply in the footnotes across thousands of companies.” – pp. 4, 2<sup>nd</sup> para.

### **Superior Stock Ratings**

Robo-Analysts’ stock ratings outperform those from human analysts as shown in this [paper](#) from Harvard Business School. Bloomberg features the paper [here](#).

Key quotes from the paper:

- “the portfolios formed following the buy recommendations of Robo-Analysts earn abnormal returns that are statistically and economically significant.” – pp. 6, 3<sup>rd</sup> para.
- “Our results ultimately suggest that Robo-Analysts are a valuable, alternative information intermediary to traditional sell-side analysts.” – pp. 20, 3<sup>rd</sup> para.

Our mission is to provide the best fundamental analysis of public and private businesses in the world and make it affordable for all investors, not just Wall Street insiders.

We believe every investor deserves to know the whole truth about the profitability and valuation of any company they consider for investment. More details on our cutting-edge technology and how we use it are [here](#).

## ***DISCLOSURES***

New Constructs®, LLC (together with any subsidiaries and/or affiliates, "New Constructs") is an independent organization with no management ties to the companies it covers. None of the members of New Constructs' management team or the management team of any New Constructs' affiliate holds a seat on the Board of Directors of any of the companies New Constructs covers. New Constructs does not perform any investment or merchant banking functions and does not operate a trading desk.

New Constructs' Stock Ownership Policy prevents any of its employees or managers from engaging in Insider Trading and restricts any trading whereby an employee may exploit inside information regarding our stock research. In addition, employees and managers of the company are bound by a code of ethics that restricts them from purchasing or selling a security that they know or should have known was under consideration for inclusion in a New Constructs report nor may they purchase or sell a security for the first two days after New Constructs issues a report on that security.
